

# DesignPro Tools licensing

Concurrent licensing makes  
it easy to add new DesignPro  
Tools™ Plus users and  
streamlines administration

## Does concurrent licensing make sense for your organization?

### One license enables all users

Trade in all your individual licenses (and the related administrative hassles) for a single license that manages all the DesignPro Tools Plus user sessions.

### Streamlines licensing administration and renewals

This model provides a one step licensing procedure that allows all your DesignPro Tools Plus users to access the software. Simply tell us the number of users who need access and we'll configure the license to support everyone.

### Share the DesignPro Tools Plus project load

Concurrent licensing is ideal for companies who distribute the DesignPro Tools Plus projects across a team of users.

### Train staff quickly with self-study programs

Elixir's self-study training allows students to work at their own pace and incorporate study time with day-to-day business responsibilities. Elixir® instructors work with students online during times that are convenient for everyone.

## How it works

This model is designed to support expanded use of DesignPro Tools Plus across an organization without the physical limitation imposed by workstation-based licenses.

You decide the maximum number of concurrent users and the Elixir® license server does the rest. Each time a user starts a DesignPro Tools Plus session, the license server first checks to see how many folks are currently using the software. If the maximum number of users has not been exceeded then a license is granted in real-time and DesignPro Tools Plus starts. If not, the user must wait until someone else closes their DesignPro Tools Plus session.
