

Elixir Document Server

A **secure** and **scalable** source of truth for fast and easy access to vital information

Elixir[®] Document Server (EDS) is a great way to organize all your files in a single, central location; but what makes it different than other online document storage options?

Most online storage and backup services duplicate files, rather than use the original file, and then store these duplicates in a low-cost format.

As a result, it takes forever to retrieve the data you need.

With Elixir® Document Server, you can:

Quickly retrieve files in their original format, thanks to metadata tags that can be applied to organize files and enforce rules and policies.

Securely support more files for more users over a longer time than other online storage services and automate storage parameters.

Accept files from multiple systems and sources, thanks to open standards that make it easy to integrate EDS with third party applications.

Create new files, restrict access, monitor and track edits, and leverage a host of related capabilities.

Enforce policies and regulatory compliance and assign rules to support best practices for storage and searchability.

Apply metadata to align end user access permissions with security and compliance rules and policies.

Find what you are looking for quickly and make files even easier to retrieve and manage with layers of metadata that provide granular intelligence and searchability.

The competitive advantage is clear

Transformation happens.
Elixir provides simple, vital,
and proven solutions for
content creation and
customer communication.
